1 Project Overview

1.1 Background

Robe River Mining Co. Pty. Ltd., a member of the Rio Tinto group of companies, has constructed a second port facility (Port B) at Cape Lambert, located approximately 5 km west of Point Samson on the Pilbara coast, Western Australia. The Cape Lambert Port B (CLB) project scope broadly included the construction of a rail track network, ore stockyards, ore delivery systems, an access jetty and wharf and various associated ancillaries. The project was constructed in two discrete phases (termed A and B) which were completed in mid-2015; key infrastructure associated with each phase of the project is detailed within Table 1 below. The project also included a large dredging scope to establish a departure channel, turning basins and berth pockets to facilitate access for bulk ore carriers. CLB operations are approved to export up to 130 million tonnes of iron ore per annum.

1.2 Legislative Context

The CLB development was referred to the Federal government on 12 February 2008 in accordance with the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act). On 25 March 2008 the Federal government determined that the proposal was a ‘controlled action’ based on potential impacts to matters of National Environmental Significance (NES) protected by the EPBC Act, including:

- listed threatened species and communities (Section 18);
- listed migratory species (Section 20, 20A and 18A); and
- Commonwealth marine areas (Section 23 and 24A).

The CLB development was assessed by the Federal government as a Public Environmental Review and draft Public Environment Report (PER) in March 2009 and was subsequently approved on 26 October 2010 pursuant to EPBC 2008/4032. EPBC 2008/4032 requires the development and implementation of a Dredging and Spoil Disposal Management Plan (DSDMP), Cetacean Management Plan (CMP), Marine Turtle Management Plan (MTMP), Blasting Management Plan and Ecosystem Research and Monitoring Program (ERMP) to manage the project’s critical risks, and also includes a series of other general management requirements.

The project’s dredging scope was approved under the Environment Protection (Sea Dumping) Act 1981 on 26 October 2010 pursuant to SD2008/822.
2 Purpose of this Document

2.1 Objective

Condition 18 of EPBC 2008/4032 requires Rio Tinto to provide compliance assessments to the Department of the Environment and Energy (DoTEE) on an annual basis. Condition 18 specifically states:

18. Each year the person taking the action must provide a report to the Minister addressing compliance with each of the conditions of this approval. The date of the first compliance report must be within twelve months from the date of this approval with each subsequent report 12 months from the date of the previous report. The Compliance report must:
   a) Be endorsed by Pilbara Iron Pty Ltd or a person approved in writing by the Department, who is delegated to sign on behalf of Pilbara Iron Pty Ltd;
   b) Include a statement as to whether the person taking the action has complied with the conditions;
   c) Identify any non-compliances and describe corrective and preventative actions taken; and
   d) Make the compliance report publicly available on the Internet within 30 days of it being submitted to the Minister.

The intent of this document is to fulfil this requirement for the period 1 January to 31 December 2017 (referred to as the ‘2017 reporting period’ herein).

2.2 Scope

This document assesses compliance against the requirements of EPBC 2008/4032 for the 2017 reporting period. To avoid duplication, items which have been listed as complete within previous compliance assessments will not be reassessed within this report. For further details regarding completed scopes refer to the 2011 (RTIO-HSE-0160590), 2012 (RTIO-HSE-0200765) 2013 (RTIO-HSE-0240147) 2014 (RTIO-HSE-0265603), 2015 (RTIO-HSE-0294615) and 2016 (RTIO-HSE-0313831) annual compliance reports. All compliance reports are also made available on Rio Tinto’s corporate website (refer to Section 4).

3 Compliance Assessment Results

All actions were complied with during the 2017 reporting period, confirming that the CLB development continues to be operated in accordance with the various environmental management requirements stipulated within the Federal Government approvals and associated management plans, and that implementation of the works have not resulted in any measurable impacts to matters of NES.

All supporting documents have been lodged in Rio Tinto Iron Ore’s Document Management System and are available upon request. Electronic documents have also been provided to the DotEE in accordance with approval and management plan requirements.

4 Public Availability of Compliance Assessment

This compliance assessment will be made publicly available on the Rio Tinto Iron Ore website (http://www.riotinto.com), in accordance with Condition 18 (d) of EPBC 2008/4032.
5 Future Compliance Assessments

Future compliance assessments will continue to be submitted annually and will assess implementation of EPBC 2008/4032 during the previous calendar year. The next compliance assessment will assess the period 1 January 2018 to 31 December 2018 and will be submitted prior to 31 December 2019.

This compliance assessment will assess all relevant conditions within EPBC 2008/4032 for the 2017 calendar year. Items which have been marked as complete within previous compliance assessments will not be reassessed to avoid duplication.

### Action 5.11 Management MTMP
Implement dune surface stabilisation and revegetation programme at the Bells Beach primary dune if monitoring indicates landform stability is being compromised.

**When:** As required.

**Evidence:** Vegetation monitoring conducted between 2015 and 2016 indicated marginal increases in dune erosion levels. Given that dune morphology is naturally dynamic and the lack of long-term data, additional monitoring was recommended to increase confidence in findings prior to the implementation of any active management.

Follow-up surveys conducted in 2017 (our ref: RTIO-HSE-0319296) found a decline in erosion levels, indicating that the sands are mobile on Bells Beach and erosion varies from year to year. This erosion is believed to have been caused by a combination of natural (turtle nesting and euro grazing activity) and anthropogenic (historical quad bike tracks) activities. The surveys also identified potential deposition of operational and regional particulates on dune flora, but no correlation with erosion levels were determined.

Given these results, no formal remedial activities were triggered during this reporting period.

### Action 5.10 Management MTMP
Identify any sections of beaches that are subject to elevated light levels from artificial sources.

**When:** Ongoing.

**Evidence:** Light monitoring has been conducted at Bells Beach, Cooling Water Beach and Delambre Island, as required. Monitoring results are stored within the Cape Lambert Port B light spill monitoring register (our ref: RTIO-HSE-0175026).

### Action 5.9 Management MTMP
Develop and implement additional lighting design modifications to address source of elevated light levels.

**When:** As required.

**Evidence:** Light levels have been recorded as per the Cape Lambert Port B light spill monitoring register (our ref: RTIO-HSE-0175026).

### Action 5.8 Management MTMP
Provide initial report on light spill analysis.

**When:** Within 6 months of commissioning.

**Evidence:** The light spill analysis report was provided to the Department of the Environment and Energy on 28 July 2015 (our ref: RTIO-HSE-0264372), as required.

### Action 5.7 Management MTMP
Continue dust management improvement programme.

**When:** Ongoing.

**Evidence:** Cape Lambert’s Dust Management Plan includes a dust management improvement component. Refer to Section 2.1.3 of the Dust Management Plan for further details (our ref: RTIO-HSE-0221343).

### Action 5.6 Management MTMP
Include a marine turtle education and management requirements component in site inductions.

**When:** Once.

**Evidence:** Marine turtle information is included in the Cape Lambert site essentials induction package and quick reference guide. This information is currently linked on the Rio Tinto Iron Ore intranet page (https://intranet.riotinto.org/intranets/ironore/training/Pages/How-to-get-onsite.aspx).

### Action 5.5 Management MTMP
No personnel or vehicles to access Bells Beach or Cooling Water Beach without SEO approval.

**When:** Ongoing.

**Evidence:** Both Bells and Cooling Water beaches are recorded as exclusion zones within the proponent’s GIS and approvals databases and can only be accessed with appropriate authorisation, as required. Refer to the dispensation allowing Bells and Cooling Water beaches to be accessed for light spill monitoring (our ref: RTIO-HSE-0098712).

### Action 5.4 Management MTMP
Implement misoriented turtle protocol and liaise with DEC and DSEWPaC as required.

**When:** Operations.

**Evidence:** No misoriented turtles were recorded in 2017.

### Action 5.10 Management MTMP
Report any incidents involving marine turtles.

**When:** Ongoing.

**Evidence:** No operations-related marine turtle incidents occurred during this reporting period.

### Action 5.11 Management MTMP
Develop and implement effective waste management practices for the Cape Lambert landfill or its replacement.

**When:** Operations.

**Evidence:** The Cape Lambert landfill tenure has been relinquished. No other landfills have been installed within the vicinity of Bells or Cooling Water beaches. Operational waste is removed from site by a licensed waste management company.

<tr>
<td>MTMP Management Action 6.10</td>
<td>Monitor hatching dispersal patterns on onshore habitats.</td>
<td>Annually.</td>
<td>Hatching dispersal assessments were conducted at Bells Beach during the 2016/17 marine turtle nesting season by monitoring hatching fans (the spread of hatching tracks from nest emergence to the high tide line). The centre of each fan was compared to the direction directly to the water from the nest. The angular difference (offset angle) between these directions gives an indication of whether dispersal was potentially influenced by external factors including light. At Bells Beach, a positive offset angle indicates deviation towards operations, and a negative offset angle indicates deviation away from site. In 2016/17 there was a significant difference between the centre of fans and the direction directly to water, with an average deviation of 10.7°, i.e. hatchlings deviated slightly towards site while transiting the beach to water. However, this result does not consider the potential for natural light (such as moonlight) to influence hatching orientation. As a significant result was also observed in 2015/16 (offset angle 5.8°), data for the 2017/18 season was processed immediately upon collection to identify whether this trend had continued. There was no significant difference between the fan centre and direction to water in 2017/18, with the average offset angle (-1.5°) deviating slightly away from operations (results based on Paired T-tests; p &gt; 0.05; all results mean ± se).</td>
<td>Compliant.</td>

The requirements of MTMP 6.11b have been completed in-full, as reported in previous compliance assessments. Complete.

MTMP Management Action 6.12 to 6.14 | Continue incident reporting programme and analyse turtle related incidents. Report mortalities of marine turtles found within the Port B Development work area through notification to DSEWPaC within 48 hours of the sighting. Undertake an investigation if the injured or dead turtle is attributed to the Port B Development and refer to one of three trigger levels to guide any management response. | When an incident occurs involving marine turtles. Within 48 hours of sighting. In the event of a marine turtle mortality which is attributable to the Port B Development. | There were no marine turtle incidents attributable to Cape Lambert Port B operations during this reporting period. | Not applicable. |

MTMP Management Action 6.15 | Report to the DSEWPaC if any turtles/hatchlings need to be relocated outlining matters such as the reason for the relocation, the site where the turtles/hatchling was relocated from and where it was relocated to, and timing) within 48 hours. | Within 48 hours of a marine turtle relocation. | No marine turtle relocations were required during this reporting period. | Not applicable. |
